Celebrating a Century of Building America

A brilliant idea – the look of beveled glass for half the cost.

It's a classic symbol of respect for the beauty of your home — and the power of sunlight. It's like the facets of a jewel. Or the sparkle of heirloom crystal.

Now you can add the valuable look of beveled glass to your home, for a lot less money.

New technology creates traditional details. The brilliant inventors and engineers at 3M have developed an optical way to create the traditional details of beveled glass. Innovative film technology bends the light to create perfect illusions — and beautiful rainbows.

PrismGrid bonds permanently to the glass surface — inside the double pane unit. It's been tested to resist shrinkage, discoloration and delamination.

A range of patterns lets you brighten your home your way. PrismGrid technology can create edge, bevel and v-groove designs. So there's a wide range of looks to choose from. To match your home's personality. And its value.

Choose from the patterns listed on the back of this brochure. And combine them with

CertainTeed's comprehensive selection of window styles — from double- and single-hung, to sliders and casements, to bays and bows — even patio doors.

Easy care, and no maintenance. Unlike traditional beveled glass, there's no additional work in cleaning. The pattern is inside the double-pane unit, so you simply wipe a flat pane — indoors and out.

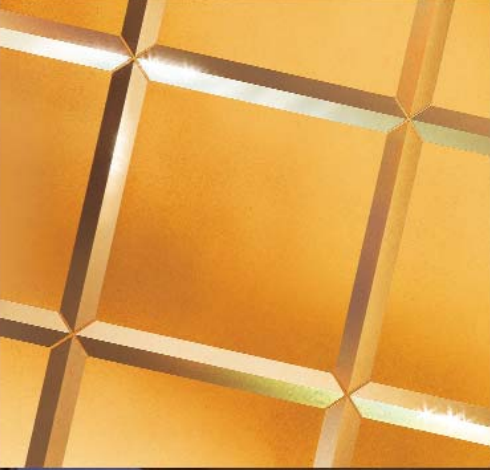

And, as with all CertainTeed vinyl windows, there's no maintenance. You'll never scrape or paint windows again.

The quality you expect from CertainTeed. CertainTeed has added PrismGrid to its window lines because it's a technology that has the same characteristics as our own. It delivers quality and generates trust.

It's backed by our industry-leading warranties, and the full strength of a \$2.5 billion corporation that's been in the building products business for a century.

PrismGrid™, enhanced with 3M™ Accentrim™ products.

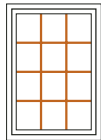

Brighten your home the way you choose.

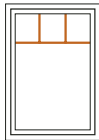

Colonial Pattern

Featuring classic v-groove bevels in the pattern of traditional muntins. Patterns are adjusted for window size and may include more or fewer "lites."

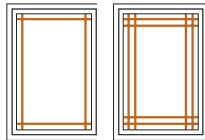

Valance Pattern

A bevel edge at the top touches your window with style, color, and light.

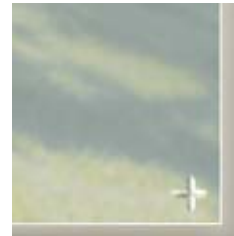

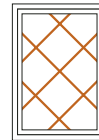

Prairie Patterns

A bevel edge frames your window space, adding a charming ambience—with the brilliance and color of prismatic glass.

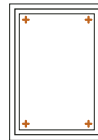

Diamond Pattern

V-grooves meet with a hint of tradition from Tudor to Victorian, and the result lives up to its name in sparkle and interest.

Jewels

Have some elegant fun. You can choose where to place these cut-glass patterns to create a unique appearance for a special room or home.

Please note: Pattern availability may vary by manufacturing location.

CertainTeed windows with the Thermaflect® glazing system meet the ENERGY STAR® guidelines for thermal efficiency in all climate regions.
